Designed By: Danial Aneeq Ahmed

TRANSITIONING TO THE TECHNICAL PLANNING:

The website will work to provide quality things with affordable price. The platform will provide user friendly interface and will provide safe payment methods also include live tracking option for customers to build their trust. Product will manage using Sanity (Headless CMS).

Frontend Requirements:

- ❖ Providing interactive user interface, easy navigation, smooth integration.
- ❖ Highly responsive design for user convenience.
- ❖ Essential Pages Include:
    - home page
    - Product page
    - cart page
    - about page
    - product detailed page
    - FAQ's page
    - contact us page
    - checkout page
    - sign-up page

Sanity CMS As Backend:

Using sanity, I will manage the content and displayed it wisely. Sanity stores the product data, customer information, order details, and payment types. By creating meaningful schemas, I will manage all the things like product details, orders, user information.

Third Party API's:

Thorough payment Api's will provide easy, secure payment methods (Stripe, Lemon Squeezy) for customers.

Allow customers to track the status and updates of their order using shipment Api's.
